

# Follow the Eye Before See Rule

Make sure your Eye Doctor  
not only tests your vision  
with a Refraction but  
Performs an  
Eye Health Exam.

A 20/20 Eye  
is not necessarily a  
Healthy Eye.

Don't wait till you have a  
problem with your vision.

Schedule Your Comprehensive  
Eye Exam Today

# Eye Before See

## Your Eye Health

The Importance of  
Having an  
Eye Health Exam

THE  
OPTOMETRIC SOCIETY

**DID YOU KNOW?**

An eye that has 20/20 vision can still have an eye disease.

Eye Disorders such as Glaucoma, Diabetic Eye Disease, Retinal Holes, Tears or Detachments & Tumors can all be found in a person with 20/20 vision, at any age.

---

**DID YOU KNOW?**

Medical problems such as Diabetes, High Blood Pressure, High Cholesterol, Neurological Disorders and Autoimmune Diseases can be found through a comprehensive eye exam even if you have 20/20 vision, at any age.

---

**DID YOU KNOW?**

Refraction, the test to determine the prescription of your eyes, is only one part of a Comprehensive Eye Exam. Without a Comprehensive Eye Exam it is not possible to make sure your eyes are healthy.

**DID YOU KNOW?**

Many Eye and Systemic Diseases, if caught early, can be treated before you experience any vision loss.

---

In order for your Eyes to See Well, you must first have Healthy Eyes. Just because you have 20/20 Vision, does not mean you or your eyes are healthy.

Only through a comprehensive eye exam, which includes an eye health assessment, can you make sure your eyes are healthy.

---

A Refraction Alone Cannot Determine the Health of Your Eyes

**Follow the  
Eye Before See  
Rule**

Have an Eye Health Exam as part of a Comprehensive Eye Exam
